

Air Film Transporters

Air film transporters utilize air bearings to create a near-frictionless interface for moving heavy loads. They are ideal for industries where minimizing vibration and contamination is crucial, such as semiconductor manufacturing and aerospace.

Product Overview

Air Film Transporters

These air film transporters are engineered for the seamless movement of heavy, sensitive equipment in controlled environments like cleanrooms. By utilizing advanced air bearing technology, they create a near-frictionless interface that protects delicate floors and minimizes vibration during transit. The system is designed for compact, simple operation and uses compressed air as a power source, offering a cost-effective and efficient logistics solution.

Operational Features

Operational Advantages

- Compact and simple structure
- Easy to operate
- Protects cleanroom flooring
- Vibration reduction for precise equipment
- Cost-effective operation using compressed air

Customization

Yes

Power Source

Compressed Air
