

Air Operated Double Diaphragm Pump

This air-operated double diaphragm (AODD) pump is designed for transferring a wide variety of fluids, including viscous and abrasive materials. It features a robust construction for demanding industrial applications.

Product Overview

Industrial AODD Pump Overview

This air-operated double diaphragm pump is engineered for the efficient transfer of diverse fluids, ranging from viscous to abrasive materials. Utilizing compressed air to drive reciprocating diaphragms, the unit ensures reliable performance in demanding industrial environments. It offers self-priming capabilities and the distinct advantage of being able to run dry without sustaining damage.

Key Features

Operational Capabilities

- Self-priming operation
- Dry-run capability
- Handles viscous materials
- Handles abrasive materials

Applications

Suitable Industries

Chemical Transfer, Wastewater Treatment, General Fluid Handling

Technical Design

Drive Mechanism

Compressed air driven

Pump Type

Double Diaphragm
