

# Air-Operated Double Diaphragm Pump for Fluid Transfer

This air-operated double diaphragm (AODD) pump excels in various fluid transfer applications. Its durable construction and corrosion-resistant components ensure reliable performance and minimal maintenance in demanding industrial environments.

## Overview

### Air-Operated Double Diaphragm Pump

This air-operated double diaphragm (AODD) pump is engineered for versatile fluid transfer across demanding industrial environments. Featuring a robust, corrosion-resistant construction, it ensures reliable performance with minimal maintenance requirements. The air-operated mechanism eliminates the need for electrical power, making it a safe and effective solution for hazardous locations and diverse pumping needs.

## Technical Features

### Operational Capabilities

- Self-priming
- Adjustable flow rates
- Handles viscous liquids
- Handles slurries
- Handles fluids with solids

<b>Pump Type</b>	Air-Operated Double Diaphragm (AODD)
<b>Safety &amp; Compliance</b>	Hazardous Location Safe, Non-Electric Operation, Corrosion-Resistant

## Applications

### Suitable Industries

Chemical Processing • Wastewater Treatment • General Industrial
