

Air-Powered Spraying and Spreading Unit

This spraying and spreading unit is engineered for efficient operation and reliable performance. Its compact design and sturdy construction make it suitable for both stationary and portable use.

Overview

High-Performance Air-Powered Unit

This air-powered spraying and spreading unit is engineered for demanding industrial applications requiring consistent, high-pressure output. Featuring a robust aluminum tank for compressed air storage, the system ensures reliable and efficient operation during intensive tasks. Its compact and sturdy design offers professional users the flexibility of both stationary installation and portable operation on-site.

Technical Specifications

Control Features

- Integrated pressure gauge
- Adjustable control valve

Tank Material	Aluminum
Operation Versatility	Stationary, Portable

Key Performance Metrics

System Efficiency

1 Air-Powered
