

Air Precleaner for Construction Machinery

This air precleaner separates over 95% of impurities from intake air, improving fuel efficiency. Its compact, modular design requires minimal space and extends air filter life.

Product Overview

Next-Generation Air Pre-cleaner Technology

This advanced air pre-cleaner series represents a significant leap in filtration technology, utilizing high-grade engineering plastics to replace traditional metal structures. Designed for construction machinery, these units are lightweight, easy to install, and simple to maintain, ensuring optimal engine performance by effectively removing dust and debris. Built upon a proven technology platform, this product is engineered to be both environmentally friendly and highly durable in harsh operating environments.

Technical Specifications

Construction Material	Engineering Plastic
Release Date	April 2019
Design Focus	Lightweight, Easy Maintenance, Environmentally Friendly, High Efficiency

Logistics & Availability

Availability

Large Stock Available • Short Lead Times

Quality Standards	Yes
