

Air Purification System with Virus Filtration

This air purification system is designed to improve indoor air quality. It incorporates filtration technologies to remove pollutants and viruses from the air.

Product Overview

Advanced Air Purification Technology

This air antivirus purification machine is engineered to significantly enhance indoor air quality by effectively removing pollutants and viruses. Its compact, tower-like design allows for seamless integration into various professional and residential environments, including offices and homes. Featuring an intuitive control panel at the base, it offers user-friendly operation alongside sleek, modern aesthetics.

Design & Build

Form Factor	Tower-style
Color	Silver
Control Interface	Base-mounted control panel with indicator lights

Functionality

Primary Function	Air Purification, Virus Filtration, Pollutant Removal
