

Air Purifier with Antivirus Function

This air purification machine removes airborne particles and viruses for a cleaner environment. It features multi-stage filtration, including HEPA and activated carbon filters, and an antivirus function to neutralize microorganisms.

Overview

Air Antivirus Purification System

This advanced air purification machine is engineered to create a cleaner and healthier indoor environment by effectively removing airborne particles and neutralizing microorganisms. It utilizes a comprehensive multi-stage filtration system, including HEPA and activated carbon layers, to capture pollutants such as dust, pollen, pet dander, odors, and VOCs. Designed for versatility, this unit is suitable for homes, offices, and various indoor professional spaces.

Filtration System

Filtration Stages

- Pre-filter
- HEPA filter
- Activated carbon filter

Antivirus Function	Yes
--------------------	-----

Features

Control Interface

Adjustable Fan Speed • Air Quality Monitoring • Intuitive Control Panel

Target Pollutants	Dust, Pollen, Pet Dander, Odors, VOCs, Microorganisms
-------------------	---

Applications

Suitable Environments	Home, Office, Indoor Spaces
