

Air Source Heat Pump Water Heater

This air source water heater uses ambient air to heat water efficiently. The product features a compact design, external controls, and a pressure gauge.

Product Overview

Efficient Air Source Heating

This air source heat pump water heater is designed for high-efficiency water heating, utilizing ambient air to reduce energy consumption. With a robust heat output of 6.6kW, it is suitable for residential or light commercial applications requiring consistent hot water supply. The unit operates effectively in temperatures ranging from -10°C to 40°C, ensuring reliable performance across varying environmental conditions.

Performance Metrics

Heat Output

6.6 kW

Heat Output

145 L/h

Hot Water Compensation Rate

Rated Input Power	1750 W
Rated Input Current	8 A

Technical Specifications

Power Supply	220V / 50Hz
Water Temperature Range	40 to 60 °C
Operating Environment	-10 to 40 °C
Noise Level	51 dB(A)

Physical Dimensions

Weight	62 kg
Dimensions (L x W x H)	805 x 305 x 685 mm
