

Air Source Heat Pump Water Heater

This air source heat pump water heater is designed for both residential and commercial use. It uses heat pump technology to efficiently extract heat from the ambient air for water heating.

Product Overview

High-Efficiency Heating Solution

This air-sourced water heater is engineered for both residential and commercial applications, utilizing advanced heat pump technology to extract heat from ambient air. By leveraging this efficient heat exchange process, the unit provides a sustainable solution for water heating needs. It features a robust, weather-resistant outdoor unit equipped with a large fan for optimal performance and intelligent controls for precise temperature management.

Key Features

Design Highlights

- Advanced heat pump technology
- Robust weather-resistant casing
- Large fan for optimal heat exchange
- Intelligent temperature control system

Suitable Applications

Residential, Commercial
