

Air to Water Heat Pump with EVI Technology

This air-to-water heat pump is designed to operate in very cold climates, down to -35 . Equipped with an EVI compressor, it delivers high efficiency and superior heating performance compared to standard heat pumps.

Product Overview

High-Efficiency EVI Climate Control

This advanced air-to-water heat pump features Enhanced Vapor Injection (EVI) technology, designed specifically for reliable operation in extreme cold climates down to -35°C. By effectively managing heating and cooling, it offers superior performance compared to standard systems, with heating capacity improvements of 50-80%. It is a versatile solution suitable for residential and commercial applications, including villas, hotels, and offices, and integrates seamlessly with fan coils and floor heating systems.

Technical Specifications

Designed for reliable operation across extreme temperature variances.

High-quality internal components featuring EVI compressor and efficient heat exchangers.

Model	YINI-600S-DCN
Ambient Temperature Range	-35 to +43°C
Power Supply	380V 3N~50Hz
Protection Grade	IPX4
Electric Shock Proof Grade	Class I

Performance Metrics

Cost-effective heating performance compared to traditional gas and electric systems.

Operational Performance

Mode	Capacity	COP
Cooling	130.0 kW	2.8
Low-temp Heating (A-12W41)	82.0 kW	2.4
Normal Heating (A7W45)	146.0 kW	3.6

Features & Benefits

Versatile system integration for heating and cooling applications.

Intelligent control panel for precise temperature management and mode selection.

System Compatibility

- Fan Coil Units
- Floor Heating Systems
- Radiators
- Central Air Conditioning

Key Features

EVI Technology, Automatic Defrost, Mechanical Antifreeze, Timed Start, Intelligent Control, Quiet Operation

Compliance & Services

Certified for international safety and performance standards.

Certifications

CE • CB • SAA • GS • ErP • RoHS • SASO
