

Air Treatment System with Humidification and Dehumidification

This advanced system is designed for both humidifying and dehumidifying air. It is ideal for maintaining optimal air quality in residential and commercial environments with its smart climate control.

Overview

Advanced Climate Control Solution

This advanced air treatment system is engineered to provide precise control over both humidification and dehumidification levels, ensuring optimal indoor air quality. Designed for versatility, it is suitable for a wide range of applications, including both residential and commercial environments. The unit integrates smart climate control technology with a sustainable floating solar panel array, making it an innovative choice for modern facility management.

Key Features

Design Highlights

- Floating solar panel array
- Integrated landscape design

Core Functionalities

Humidification, Dehumidification, Smart Climate Control

Performance

Suitable Environments

Residential • Commercial
