

Aircraft Pushback Towing Vehicle

This specialized vehicle is designed for aircraft handling. It features a robust build with a front-mounted towing mechanism.

Overview

Professional Aircraft Ground Support

The TD160 tow tractor is engineered for the efficient handling of small to medium-sized aircraft, specifically rated for models up to the B767. Featuring a four-wheel-drive system and four distinct steering modes, it delivers superior maneuverability and traction in diverse airport environments. With an emphasis on safety and operator ergonomics, this vehicle integrates advanced braking systems and excellent cabin visibility to ensure reliable performance.

Technical Capabilities

Maximum Aircraft Capacity	B767 and lower weight aircraft
Drivetrain	Four-wheel drive
Steering Modes	4

Safety Systems

Safety Features

- Visual imaging system
- Excellent operator visibility
- Ergonomic cabin design

Braking Systems	Dual circuit hydraulic, Wet disk brakes
-----------------	---

Maintenance

Maintenance Design	Easy access to all major components for reduced costs
--------------------	---
