Overview

High-Capacity Airport Transit Solution

This double-decker passenger bus is a cost-effective solution designed specifically for high-traffic airport and urban environments. With an overall length of 11.32 meters on a two-axle chassis, it maximizes efficiency by accommodating up to 83 passengers. The vehicle combines a fashionable European-inspired aesthetic with advanced electric propulsion for a sustainable, quiet, and professional transport experience.

Technical Dimensions

Physical Metrics

11.32 m

Overall Length

83

Max Passenger Capacity

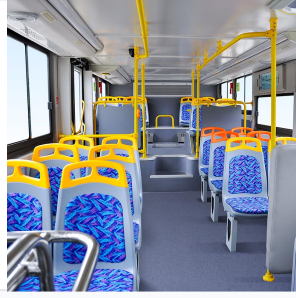

2

Number of Axles

Design & Exterior

Exterior Design	European-style square tone with small rounded corners and ultra-space design
Windshield Type	Large-area double-curved panoramic laminated glass
Aerodynamic Features	Sleek aerodynamic profile to improve fuel efficiency and reduce noise pollution

Interior & Amenities

Spacious interior featuring patterned seating, overhead handrails, and large panoramic windows for passenger comfort.

Passenger Amenities

Free Wi-Fi, Panoramic Windows, Comfortable Seating, Overhead Handrails, Spacious Aisles

Interior Layout

Two-level design with patterned upholstery and ample standing room

Propulsion & Environment

Modern electric double-decker bus designed for airport transit, featuring zero-emission propulsion and integrated Wi-Fi.

Propulsion Technology

Electric Vehicle (EV) • Zero Emissions • Low Noise

Environmental Standard

Adheres to stringent international emission standards

Safety & Chassis

Safety Systems

- Comprehensive braking systems
- Stability control
- Robust chassis for heavy usage
- Multi-axle stability configuration

Operational Features

Boarding & Storage

- Multiple doors for quick boarding/disembarking
- Ample luggage storage space
- Accessibility features for passengers with disabilities
