

Airport Terminal Enclosed Walkways and Passenger Boarding Bridges

These airport terminal enclosed walkways connect airport terminals, ensuring passenger convenience and safety. Passenger boarding bridges allow passengers to board and deboard aircraft without exposure to the elements.

Product Overview

Integrated Airport Transit Solutions

This equipment provides comprehensive solutions for airport passenger transit, including both terminal-to-terminal enclosed walkways and aircraft-to-terminal boarding bridges. Designed to enhance passenger safety and convenience, these structures offer full weather protection and secure access across airport complexes. The systems are engineered to accommodate varying aircraft sizes and passenger flow requirements, ensuring efficient boarding and transit operations.

Proven Deployment

Capital Airport, Pudong Airport, Tianhe Airport, Zhongchuan Airport

Enclosed Walkways

Walkway Specifications

- Elevated enclosed design
- Steel support structure
- Glass paneling for visibility
- Weather-protected pedestrian transit

Passenger Boarding Bridges

Boarding Bridge Capabilities

- Telescoping tunnel mechanism
- Adjustable for various aircraft sizes
- Mobile support structures with wheels
- Direct gate-to-aircraft connection
