

Alcoholic Beverage Washing Filling and Sealing Machine

This machine integrates washing, filling, and sealing functions for efficient production. It is suitable for processing various non-sparkling beverages like wine, edible oil, and vinegar in glass bottles.

Product Overview

Integrated Beverage Processing Solution

This series of equipment is designed for the efficient production of non-sparkling beverages, including alcoholic drinks, edible oils, and vinegar. It seamlessly integrates three essential functions—bottle washing, filling, and capping—into a single, automated machine. The system features a robust, rational design with a high degree of automation, ensuring convenient operation and maintenance for industrial production lines.

Key Features

Core Functions	Bottle Washing, Filling, Capping
Suitable Products	Non-sparkling Wine, Edible Oil, Vinegar
