

Alkaline Battery Components

Collection of cylindrical components used in alkaline batteries. The metallic casings vary in height and diameter, suggesting different battery sizes or internal configurations.

Product Overview

Precision-Engineered Battery Components

These high-quality alkaline battery components are designed for seamless integration into battery assembly lines. Featuring durable metallic casings, these parts provide the structural integrity and terminal connectivity required for reliable battery performance. The collection includes various sizes and shapes to accommodate different battery configurations, ensuring versatility for diverse manufacturing needs.

Technical Specifications

Design Features

- Rounded top with terminal protrusion
- Uniform metallic finish
- Variable height and diameter options

Primary Use

Alkaline Battery Assembly • Industrial Manufacturing

Material	Steel or Aluminum
Type	Cylindrical Casings, Battery Terminals, Assembly Parts
