

All-Terrain Tracked Communications Vehicle

The all-terrain tracked communications vehicle is engineered for mobility and functionality in challenging environments. Equipped with a robust tracked system, it navigates diverse terrains with ease, ensuring reliable communications and command capabilities.

Overview

All-Terrain Communications Command Solution

This all-terrain tracked communications vehicle is engineered for exceptional mobility and functionality in challenging environments. Equipped with a robust tracked system, it navigates diverse terrains with ease, ensuring reliable communications and command capabilities in remote or disaster-stricken areas. The vehicle features a spacious, climate-controlled interior, housing advanced communication equipment, workstations, and power systems, making it an indispensable asset for emergency response, scientific research, and military operations.

Communications Capabilities

Connectivity

- Multiple communication connections
- Forward command support
- Search and rescue coordination
- Stable personnel communications

Communication Package

Hyper-converged communications system

Operational Use

Primary Applications

Emergency Rescue, Search and Rescue, Command Headquarters, Remote Operations

Vehicle Features

Interior Amenities

Climate-controlled • Workstations • Integrated Power Systems

Mobility System

Tracked system
