

Alloy Steel Socket Head Cap Screw

This high-strength socket head cap screw is designed for flush or countersunk installation. The precision-engineered threads ensure reliable fastening in machinery, tooling, and automotive applications where space is limited.

Product Overview

High-Strength Fastening Solution

This alloy steel socket head cap screw is precision-engineered for applications demanding superior clamping force and reliability. Designed for flush or countersunk installations, it is an ideal choice for machinery, automotive, and tooling assemblies where space is at a premium. Constructed from high-grade alloy steel, this fastener offers exceptional durability and wear resistance for long-term performance.

Technical Specifications

Installation Type

Flush • Countersunk

Key Performance Features

- Precision-engineered threads
- High clamping force
- Superior wear resistance
- Compact design for limited space

Material	Alloy Steel
Head Style	Socket Head
Common Applications	Machinery, Tooling, Automotive
