

# Aluminum Alloy Piston for Internal Combustion Engines

This aluminum alloy piston is designed for use in internal combustion engines. It features precision-machined surfaces, optimized ring grooves, and wrist pin bores.

## Product Overview

### High-Performance Aluminum Alloy Piston

This high-performance aluminum alloy piston is engineered specifically for internal combustion engines. It features precision-machined surfaces and optimized ring grooves to ensure efficient sealing and optimal engine performance. Constructed from a durable aluminum alloy, this component offers superior heat dissipation and reduced reciprocating mass, making it suitable for a wide range of engine applications.

## Technical Specifications

### Design Features

- Precision-machined surfaces
- Optimized ring grooves
- Wrist pin bores

Construction Material	Aluminum Alloy
Performance Advantages	Heat Dissipation, Lightweight, Efficient Sealing
Model Identifier	2004
