

Aluminum and Polycarbonate LED Tube

This LED tube features an aluminum and polycarbonate (PC) body, offering a combination of durability and lightweight design. It is engineered for efficient and long-lasting illumination, suitable for a variety of lighting applications.

Product Overview

High-Efficiency LED Illumination

This LED tube is engineered with a robust aluminum and polycarbonate body, balancing durability with a lightweight profile. It is designed to provide bright, consistent light output while significantly reducing energy consumption compared to traditional fluorescent alternatives. Its advanced construction ensures effective heat dissipation, which directly contributes to an extended operational lifespan and reliable performance in various lighting applications.

Construction & Materials

Body Materials

Aluminum, Polycarbonate (PC)

Performance Features

Key Benefits

- Energy efficient design
- Effective heat dissipation
- Easy installation process
- Long-lasting performance

Light Quality

Bright • Consistent
