

Aluminum Electrical Lug

This aluminum lug is designed for secure and reliable electrical connections. Its robust construction ensures durability and corrosion resistance, making it suitable for power distribution, grounding, and other electrical applications.

Overview

High-Performance Aluminum Lugs

These aluminum lugs are engineered for secure and reliable electrical connections in demanding environments. Designed for optimal conductivity and mechanical strength, they provide a robust termination point for conductors in power distribution and grounding systems. Their durable construction ensures excellent corrosion resistance, making them suitable for both indoor and outdoor electrical applications.

Technical Specifications

Customization Options

- One hole
- Two hole
- Double level

Material

Aluminium

Applications

Common Applications

Cabinet wiring, Fuse connection, Power distribution, Grounding systems
