Product Overview

Professional Aluminum LED Profile

This high-quality aluminum profile is engineered to house and protect LED strip lights, providing a clean, professional finish for any installation. Designed to act as a heat sink, it effectively dissipates heat to extend the lifespan of your LED strips. The durable aluminum alloy construction with an anodized finish ensures excellent corrosion resistance and aesthetic appeal for architectural, furniture, and retail lighting applications.

Technical Features

Mounting Options

- Surface-mounted
- Recessed

Material & Finish

Aluminum Alloy, Anodized Finish, Corrosion Resistant

Applications

Ideal Applications

Architectural Lighting • Furniture Lighting • Retail Displays • Residential • Commercial • Industrial

Manufacturing Capabilities

Processing Type

CNC Aluminum Profile Processing
