

Aluminum Motorcycle Engine Crankcase Half

This is a high-quality aftermarket motorcycle engine casing, likely a crankcase half, designed for a specific engine model. The casing is made from lightweight aluminum, featuring precise machining and intricate internal passages for oil flow and component fitment.

Product Overview

High-Precision Engine Component

This high-quality aftermarket motorcycle engine crankcase half is engineered for precision and durability. Constructed from lightweight, high-grade aluminum, it features intricate internal passages optimized for efficient oil flow and component integration. Designed for engine rebuilds or custom builds, the casing comes prepped for assembly with accurately machined threaded holes for reliable bolt and stud fitment.

Technical Details

Material	Aluminum
Model Year Compatibility	1985
Component Type	Crankcase Half
Assembly Features	Threaded bolt holes, Internal oil passages, Precision machined

Application

Primary Use

- Engine rebuilds
- Custom motorcycle builds
