

Aluminum Oxide Flap Discs

Aluminum oxide flap discs are abrasive tools for grinding, blending, and finishing. They provide consistent material removal and a smooth finish with overlapping abrasive flaps bonded to a backing plate.

Product Overview

High-Performance Aluminum Oxide Flap Discs

These aluminum oxide flap discs are versatile abrasive tools engineered for efficient grinding, blending, and finishing tasks. Designed with overlapping abrasive flaps securely bonded to a backing plate, they ensure consistent material removal and a smooth, professional finish. They are an ideal choice for demanding applications in metal fabrication, welding, and general-purpose surface preparation.

Technical Details

Construction Features

- Overlapping abrasive flaps
- Durable backing plate
- Consistent material removal
- Smooth finish capability

Abrasive Material	Aluminum Oxide
Primary Applications	Metal Fabrication, Welding, Grinding, Blending, Finishing
