

Aluminum Rectangular Bar Support Clamp

This aluminum clamp provides secure and reliable support for rectangular bars. It is designed for indoor applications and ensures stability and alignment.

Product Overview

Professional Bus-Bar Support Solution

This aluminum rectangular bar support clamp is engineered for the secure installation and alignment of bus-bars in substation environments. Designed for durability, the assembly features a high-strength aluminum alloy upper cover paired with hot-dip galvanized steel components to ensure long-term stability and corrosion resistance. It provides a reliable clamping mechanism that simplifies installation and adjustment for various industrial and commercial electrical setups.

Technical Specifications

Material Composition

- Upper Cover: Aluminum Alloy
- Support Components: Hot-dip Galvanized Steel

Installation Features

Bolt-clamping mechanism • Adjustable design • Corrosion resistant

Application Type

Indoor, Substation, Industrial, Commercial
