

Aluminum Stepladder with Steel Platform

This aluminum stepladder has a steel top platform. It complies with EN 131 standards and includes plastic and rubber components for safety and stability.

Product Overview

Professional Aluminum Stepladder

This durable aluminum stepladder is designed for reliability and safety in professional environments. It features a robust steel top platform for added stability during use. Engineered to meet the rigorous EN 131 standard, this ladder incorporates high-quality plastic and rubber components to ensure secure footing and long-lasting performance.

Technical Specifications

Standards Compliance

EN 131

Model Number

Q0146-04

Construction & Materials

Key Features

- Steel top platform
- Aluminum frame construction
- Integrated plastic and rubber stability components

Materials

Aluminum, Steel, Plastic, Rubber
