

Aluminum Threaded Rivet Nuts

High-strength aluminum rivet nuts create durable, reliable threaded inserts in thin materials. These fasteners provide secure anchor points for screws and bolts, offering excellent resistance to pull-out and torque.

Product Overview

High-Strength Aluminum Rivet Nuts

These high-strength aluminum rivet nuts are engineered to provide reliable, durable threaded inserts in thin materials. Designed for applications where access is limited to one side of the workpiece, they offer excellent resistance to pull-out and torque. Their corrosion-resistant finish ensures long-lasting performance, making them an ideal choice for the automotive, aerospace, electronics, and general manufacturing industries.

Key Features

Material Benefits

- Corrosion-resistant finish
- High-strength aluminum construction
- Excellent pull-out resistance
- High torque resistance

Compatible Industries

Automotive, Aerospace, Electronics, General Manufacturing

Technical Specifications

Material

Aluminum

Installation Method

Single-side access

Fastener Type

Threaded Rivet Nut
