

Anchor Positioning Clamp for Catenary Wire

This clamp secures and positions contact or catenary wires at anchor joints. It is suitable for use with positive line or station line systems.

Product Overview

Anchor Positioning Clamp

This anchor positioning clamp is engineered for securing and positioning catenary wires and contact wires in railway or station line infrastructure. Constructed from galvanized steel, the component provides robust corrosion resistance for long-term reliability in industrial environments. Its versatile design features a circular collar and adjustable U-bolts, ensuring secure attachment to poles and anchor points.

Technical Specifications

Material	Galvanized Steel
Corrosion Resistance	Yes

Design Features

Attachment Hardware

- U-bolts
- Nuts
- Washers

Mounting Type	Circular collar for pole/pipe mounting
---------------	--

Application

Primary Applications	Catenary Wire, Contact Wire, Station Line Anchor, Positive Line Anchor
----------------------	--
