

Angle Fire Hose Valve

Angle fire hose valve is typically used in fire suppression systems. It is constructed from durable materials like cast iron or brass and features a handwheel for manual operation.

Product Overview

Angle Fire Hose Valve

The Angle Fire Hose Valve is a critical component designed for reliable water flow control in fire suppression systems. Constructed from durable materials such as cast iron or brass, this valve ensures long-term performance in demanding environments. It features a manual handwheel for intuitive operation and is finished in high-visibility red paint for quick identification and superior corrosion resistance.

Technical Specifications

Construction Materials	Cast Iron, Brass
Finish	Red painted for high visibility and corrosion resistance
Operation	Manual handwheel

Features

Included Accessories

- Threaded outlet for fire hose connection
- Chained dust cap for outlet protection

Primary Applications

Fire Suppression Systems • Firefighting
