Product Overview

Professional Pellet Production

This high-efficiency pellet machine utilizes a specialized process to convert agricultural materials into uniform, smooth-surfaced pellets with moderate hardness. It significantly enhances nutritional quality by promoting starch gelatinization and protein coagulation, ensuring better digestion and absorption for livestock. Designed for versatility, the system supports adjustable mould compression ratios, making it suitable for producing animal feed, organic fertilizer, and bio-fertilizer.

Technical Specifications

Machine Features

- Adjustable mould compression ratio
- High-degree internal curing
- Pathogenic bacteria and parasite reduction
- Adjustable pellet size settings

Suitable Materials

Animal Feed, Organic Fertilizer, Bio-Fertilizer

Design & Build

Build Quality

- Robust electric motor
- Large-capacity feeding hopper
- Stainless steel components
- Wheeled frame for portability

Portability

Yes
