

ANSI B16.5 Pipe Flanges

These pipe flanges connect pipes, valves, pumps, and other equipment in piping systems. Manufactured to meet the ANSI B16.5 standard, they ensure dimensional accuracy and material compatibility.

Product Overview

ANSI B16.5 Pipe Flanges

These ANSI B16.5 pipe flanges are essential components designed for connecting pipes, valves, pumps, and other equipment within industrial piping systems. Manufactured to strict ANSI B16.5 standards, they ensure precise dimensional accuracy and reliable material compatibility for demanding applications. Available in various pressure classes and configurations, these flanges are engineered to maintain the integrity and safety of critical infrastructure.

Technical Specifications

Material Composition

- Carbon Steel
- Stainless Steel
- Alloy Steel

Standard	ANSI B16.5
Available Types	Weld Neck, Slip-on, Blind, Threaded
