

ANSI Bottom Valve DN 50-350

This ANSI bottom valve is engineered for installation at the bottom of tanks or vessels, providing efficient drainage. Its robust construction ensures durability and minimizes pressure drop, maximizing flow capacity.

Overview

ANSI Bottom Valve

The ANSI Bottom Valve is engineered for reliable performance in demanding industrial applications. Designed for installation at the bottom of tanks or vessels, it provides efficient drainage while preventing sediment buildup. Its robust construction ensures durability in harsh operating environments, while the streamlined flow path minimizes pressure drop to maximize capacity.

Technical Specifications

| | |
|-----------------|--------------|
| Size Range (DN) | 50-350 |
| Standards | ANSI |
| Valve Type | Bottom Valve |

Application

Suitable Applications

- Chemical processing
- Water treatment
- Industrial tank drainage
