

ANSI Y-Strainer

The ANSI Y-strainer filters unwanted solids from liquids or gases flowing through a pipeline. Its Y-shaped design allows easy installation, and its removable screen traps debris to protect pumps and meters.

Product Overview

Industrial ANSI Y-Strainer

The ANSI Y-Strainer is a critical industrial component designed to filter out unwanted solids from liquids or gases within a pipeline. Featuring a distinct Y-shaped design, this strainer allows for straightforward installation and simplified maintenance. By trapping debris in a removable screen or basket, it effectively protects downstream equipment such as pumps and meters from particulate contamination, ensuring optimal system performance and longevity.

Technical Specifications

Compliance Standard

ANSI

Key Features

- Removable screen/basket for easy cleaning
- High-pressure and temperature resistance
- Compatible with ANSI piping systems
- Protects sensitive downstream equipment

Size Range

1/2" - 14"

Design Type

Y-Strainer

Connection Type

Flanged
