

Anvil Loppers with Telescopic Handles

These anvil loppers are designed for clean and efficient cuts on thicker branches. They feature high-carbon steel blades, a compound lever system, and telescopic handles for extended reach.

Product Overview

Professional Anvil Loppers

These professional-grade anvil loppers are engineered for efficient and clean cuts on thicker branches, making them an essential tool for orchards and gardens. Featuring high-carbon steel blades and a compound lever system, they provide increased cutting power with significantly reduced user effort. The telescopic handle design offers extended reach, while the robust yet lightweight construction ensures durability and comfort during prolonged pruning sessions.

Key Features

Ergonomic Design

- Telescopic handles for extended reach
- Lightweight construction
- Designed for prolonged use

Cutting Mechanism

Anvil Design, Compound Lever System, High-Carbon Steel Blades

Performance Metrics

Performance Highlights

1 High-Carbon Steel

Blade Material

1 Compound

Leverage Type

Usage

Applications

Tree Pruning • Shrub Maintenance • Orchard Care
