

Apartment Video Door Phone with Keypad and Card Reader

This video door phone enables video transmission and supports both digital network and non-network configurations. It allows door release via password, ID card, or indoor phone.

Product Overview

Advanced Security for Residential Buildings

This comprehensive apartment video door phone system offers enhanced security and convenience for multi-unit residential environments. By integrating high-quality visual monitoring with audio communication, residents can verify visitor identity before granting building access. The system is designed for professional applications, featuring a robust outdoor station with keyless entry capabilities via keypad and card reader.
