

API Standard Gate Valve 1-24in

This is an API standard gate valve designed for controlling fluid flow. It features flanged connections and is operated manually via a handwheel.

Overview

Industrial API Gate Valve

This industrial gate valve is engineered to meet rigorous API standards, ensuring reliable performance in demanding fluid control applications. Designed for versatility, it is suitable for critical sectors including oil and gas, water treatment, and chemical processing. Its robust construction and manual handwheel operation provide precise flow control and secure installation in pipeline systems.
