

# Appliance Spin Motor

This spin motor is designed for household appliances. It operates at 220V/50Hz with 70W power consumption and a speed of 1700 RPM CCW.

## ADDITIONAL IMAGES

## Product Overview

### High-Efficiency Spin Motor

This robust spin motor is specifically engineered for twin-tub washing machines and various household kitchen appliances requiring reliable rotational motion. The unit features a durable metal housing that facilitates superior heat dissipation for extended service life. It is equipped with a precision-engineered rotor and stator to ensure consistent performance and energy efficiency in demanding environments.

## Technical Specifications

### Performance

**70 W**

Power Consumption

**1700 RPM**

Rotational Speed

**0.8 A**

Rated Current

### Electrical Data

- Voltage: 220V
- Frequency: 50Hz
- Insulation Class: B
- Capacitor Rating: 450V

### Physical Characteristics

Metal Housing, Mounting Bracket Included, CCW Rotation
