

Application Software

This is application software. It provides a robust and adaptable solution for various application needs.

Overview

Integrated Software Architecture

This application software provides a robust architecture designed for seamless data flow between core infrastructure components. It utilizes a centralized server and database framework to ensure reliable connectivity across network environments. By optimizing the interaction between file servers and client terminals, the system streamlines information management for professional business operations.

System Architecture

Network Components

- File Server
- Database Server
- Network Switch
- Internet Gateway
- Client Terminals

Architecture Type

Client-Server • Network-Integrated
