

ARC500 Welding Machine

The ARC500 welding machine is designed for heavy-duty industrial applications. It features adjustable arc force and thermal overload protection, making it suitable for MMA and TIG welding processes.

Product Overview

Industrial Performance

The ARC500 is a high-performance welding machine engineered for heavy-duty industrial applications. It utilizes advanced inverter technology to ensure efficient power consumption while maintaining robust durability. Designed for professional use, it offers precise control and reliable performance in demanding environments.

Technical Specifications

Rated Output

500 A

Max Current

Supported Processes

- MMA (Manual Metal Arc)
- TIG (Tungsten Inert Gas)

Key Features

Build Quality

Heavy-Duty • Industrial Grade

Safety & Protection

Thermal Overload Protection, Digital Display Control

Performance Control

Yes
