

Articulated Boom Lift

The articulated boom lift offers versatile access for construction and maintenance tasks. Its multi-section boom and articulating jib provide exceptional reach and maneuverability, with hydraulic controls ensuring precise positioning and safety features including overload protection.

Overview

Versatile Aerial Access Solution

This 20-meter articulated mobile elevating work platform is designed for efficiency and safety in complex work environments. It features an obstacle-crossing capability and precise control systems, making it suitable for construction, bridge maintenance, and petrochemical industry applications. Its compact design ensures easy operation while maintaining the stability required for demanding rental services and facility maintenance tasks.

Performance Metrics

Max Working Height

20 m

Working Height

Key Features

Advantages

Obstacle-crossing, Compact Composition, Precise Control, Powerful Driving, Easy Operation

Safety & Compliance

Safety Equipment

- Overload protection
- Emergency stop buttons
- Guardrails

Applications

Suitable Industries

Building Construction • Bridge Maintenance • Equipment Maintenance • Shipyard • Petrochemical • Rental Services

Technical Details

Operational Specifications

Feature	Description
Control System	Hydraulic
Mobility	All-terrain
Primary Tasks	Painting, Electrical, Maintenance
