

Articulated Boom Lift

This articulated boom lift is designed for reaching high and difficult-to-access areas, commonly used in construction, maintenance, and industrial applications. It features a telescopic boom for extended reach and maneuverability.

Overview

High-Reach Articulated Boom Lift

This articulated boom lift is engineered for superior reach and maneuverability in complex industrial and construction environments. Featuring a versatile telescopic boom and a stable four-wheel chassis, it allows operators to access difficult-to-reach areas with precision. The unit includes an enclosed work platform with safety rails, ensuring a secure environment for elevated tasks.

Technical Specifications

Power Source	Internal combustion engine
Mobility System	Four-wheel chassis
Control Mechanism	Hydraulic controls

Safety & Design

Platform Features

- Enclosed work platform
- Safety rails
- Telescopic boom extension

Applications

Common Applications	Construction, Maintenance, Industrial
