

AS568 Standard O-Ring

This AS568 standard O-ring is designed for sealing applications requiring precision and reliability. It provides excellent resistance to compression set, abrasion, and a wide range of chemicals and fluids.

Product Overview

Precision Sealing Solutions

These AS568 standard O-rings are engineered for reliable sealing in diverse industrial environments, including hydraulic and pneumatic systems. Manufactured from high-quality elastomers, they offer exceptional resistance to high temperatures, chemical degradation, and aging. With a wide range of available materials and standardized dimensions, these components ensure a secure, leak-proof fit for critical machinery and valve applications.

Standards & Compliance

Supported Standards

AS568, JIS B 2401, BS1516, PGO, GBO, GB 1235, GB/T3452, DIN 3771

Material Specifications

Available Materials

- NBR
- HNBR
- EPDM
- SILICONE
- VITON
- NR

Technical Specs

Standard Thicknesses

- 1.78
- 2.62
- 3.53
- 5.33
- 6.99

Key Performance Features

High Temperature Resistance • Acid-Alkali Resistance • Anti-Aging • Non-Toxic • Odorless
