Product Overview

Advanced Aseptic Filling Technology

This aseptic liquid filling machine utilizes steam sterilization for bags and filling heads to ensure all processes, including capping and filling, remain under strictly aseptic conditions. Designed for high-integrity packaging, it is ideal for fruit and vegetable juices, pastes, jams, fruit purees, milk, and pulps. The system features an innovative twin-head design with an automatic rotary pallet feeding system for efficient, continuous operation.

Technical Specifications

Sterilization Method

Steam Sterilization

Filling System Type

Twin-head aseptic filling

Suitable Products

Fruit Juice, Vegetable Juice, Paste, Jam, Fruit Puree, Milk, Pulp

System Components

Core Machine Components

- Aseptic filling heads
- Pallet in/out conveying system
- Weighting system
- PLC control system
- Operation platform

Control & Safety Features

- Programmable Logic Controller (PLC)
- Touch screen interface
- Safety interlocks
- Monitoring systems
- Adjustable process parameters
