

Audio and Video Processing Unit for Broadcasting

Professional audio and video processing unit designed for radio and television broadcasting applications. This device offers advanced signal processing capabilities, ensuring high-quality audio and video output.

Product Overview

Professional Broadcast Processing

The METRO-2A AV Line Processor is a high-performance audio and video processing unit engineered specifically for professional radio and television broadcasting environments. This rack-mountable device ensures superior signal integrity and quality output through advanced processing technology. Designed for seamless integration into existing infrastructures, it provides an intuitive user interface with a dedicated display screen and tactile controls for efficient configuration and monitoring.

Technical Features

Control Interface

- Integrated display screen
- Tactile control buttons
- Front-panel configuration

Model Name	METRO-2A
Mounting Type	Rack-mountable
Target Applications	Radio Broadcasting, Television Broadcasting
