

Audio-Video Component Housing

This component is designed for use in audio-video products. It features a rectangular cutout, circular opening, and button placements for user interface and structural integration.

Product Overview

Precision Audio-Video Component Housing

This specialized housing component is designed for seamless integration into audio-video electronic systems. Featuring a durable, distinctively red finish, it includes a precisely engineered rectangular cutout and circular opening to accommodate interface elements. With dedicated button placements, this unit serves as a robust control panel or structural housing, ensuring both functional reliability and aesthetic consistency for your electronic device assembly.

Physical Characteristics

Color	Red
Key Design Elements	Rectangular Cutout, Circular Opening, Control Panel Interface, Button Mounts

Application

Component Role	Control Panel • Structural Housing
Primary Application	Audio-Video Electronic Devices
