

Auto Inverter Welding Machine with Wire Feeder

This product features an auto inverter welding machine paired with a wire feeder. The welding machine is a robust unit with a control panel featuring multiple knobs, switches, and digital displays for precise parameter adjustments.

Product Overview

Professional Inverter Welding System

The Auto Inverter Welding Machine with Wire Feeder is a robust, high-performance solution designed for professional industrial applications. Featuring integrated digital displays and precise control knobs, this unit allows for fine-tuning of welding parameters to ensure optimal results. The accompanying compact wire feeder ensures smooth, consistent wire delivery for seamless operation in demanding welding environments.

Technical Specifications

Model Identifier	NBMD-500
Equipment Type	Auto Inverter, Wire Feeder, Industrial Welding

Control Features

Control Panel Components

- Digital parameter displays
- Precision control knobs
- Manual adjustment switches

Operational Capabilities

System Highlights

Consistent wire delivery • High precision adjustments • Portable feeder unit • Robust design
