

Auto Start Control Module

This auto start control module is designed to monitor a wide range of engine parameters. It features a back-lit LCD display, configurable inputs and outputs, and comprehensive engine protection capabilities.

Overview

Intelligent Engine Control

This auto start control module is designed to provide comprehensive monitoring and protection for a wide range of engine parameters. It features a high-visibility back-lit LCD display and supports both electronic and non-electronic engine types. With configurable inputs, outputs, and advanced alarm management, it ensures reliable generator operation in various industrial applications.

Technical Capabilities

Monitored Parameters

- Engine speed
- Oil pressure
- Coolant temperature
- Fuel level
- Generator voltage
- Generator frequency

Communication Interfaces

RS232, RS485

Operation & Safety

Alarm Features

Configurable Timers • Shutdown Alarms • Warning Alarms

Engine Support

Electronic and Non-Electronic Engines
