

Auto Start Generator Control Module

This auto start control module is designed for single gen-set applications. It monitors engine parameters, provides comprehensive protection features, and offers advanced communication capabilities.

Overview

Intelligent Generator Control

This auto start control module is designed for versatile single gen-set applications, providing reliable monitoring and comprehensive protection. It features a user-friendly interface with a clear LCD display and intuitive menu navigation for ease of use. With configurable inputs and outputs, it offers flexible control options suitable for both standby and prime power systems.

Technical Features

Control Capabilities

- Engine parameter monitoring
- Comprehensive protection features
- Advanced communication
- Configurable inputs and outputs

Sensor Support

Multiple Sensor Types • Various Signal Types

Application Compatibility

Single Gen-set, Standby Power, Prime Power

Interface

LCD Display

Configuration

Yes
