

Auto Start Generator Control Module

This auto start control module is designed for a variety of single gen-set applications. It monitors engine parameters, providing comprehensive engine protection and displaying status information on a backlit LCD screen and LEDs.

Overview

Intelligent Generator Control

This sophisticated auto start control module is designed for a wide variety of single gen-set applications. It provides comprehensive engine protection by monitoring an extensive range of parameters and displaying critical status information via a back-lit LCD screen and illuminated LEDs. The unit offers flexible configuration options, including customizable inputs, outputs, timers, and alarms to suit specific operational needs.

Connectivity

Communication Interfaces

USB, RS232, RS485

Features

Monitoring & Protection

- Comprehensive engine parameter monitoring
- Engine protection system
- Back-lit LCD display
- Illuminated LED status indicators
- Configurable inputs and outputs
- Flexible timers and alarms
- Event logging

Application Type

Single Gen-Set
