

Auto Start Generator Control Module

This auto start control module is designed for a wide range of single gen-set applications. It offers comprehensive monitoring and protection features, including engine parameters, generator outputs, and mains supply.

Product Overview

Advanced Generator Control Module

This auto start control module is engineered for a wide range of single gen-set applications, providing comprehensive monitoring and protection for your equipment. It features a user-friendly LCD interface for straightforward configuration and operation, while supporting various communication interfaces for remote management. With highly configurable inputs and outputs, this unit ensures reliable and efficient operation for both diesel and gas generators.

Technical Features

Monitoring Capabilities

- Engine parameters
- Generator outputs
- Mains (utility) supply

Protection & Alarms

Warning Alarm • Shutdown Alarm

Application Compatibility

Diesel Generators, Gas Generators, Single Gen-set

Operation & Interface

Display Type

LCD Display

Operation Modes

Auto Start, Manual Starting
